A hungry infected mosquito can drink 3X her weight in blood—and transmit heartworms WITH EVERY BITE.

1. **CLIMATE CHANGE** may be expanding the mosquito/heartworm “season” in colder climes, making “safe” months impossible to predict.

2. A hungry infected mosquito can drink 3X her weight in blood—and transmit heartworms WITH EVERY BITE.

3. At least 80 SPECIES OF MOSQUITOES transmit heartworms worldwide.

5. Heartworms are ON THE MOVE and are regularly diagnosed in desert locales.

4. Different mosquito species feed at different times of day, so there’s NO SAFE TIME for pets to venture outside.

PROTECT YOUR PET 12 MONTHS A YEAR. TEST YOUR PET EVERY 12 MONTHS.
